ABOUT ME

Mid-level Full-Stack Developer with a degree in Computer Science from the University of Passo Fundo. Since 2020, I have been working on the development of websites, systems, applications, and multiplatform solutions, with a strong focus on problem-solving through the use of appropriate technologies and clean coding practices.

Currently (2024 – present), I work as a Full Stack Developer at Jornal da Cidade Online, where I am responsible for implementing improvements to the news portal, mobile app, and content system (with over 10 million monthly visits). I also maintain legacy code and server infrastructure, and research and implement new monetization strategies for the platform.

Previously (2020 – 2024), I worked as a Systems Analyst at Objetiva Software, developing websites, applications, and systems for the real estate sector — both backend and frontend — and performing deployments to iOS and Android stores.

I aim to contribute to projects that value cutting-edge technology, well-structured architecture, and real user impact. I am prepared for challenges where I can deliver clean code, sustainable solutions, and meaningful value to the business.

For more details, visit my personal website linked at the top of the page.
